

Your Catalog, Inside Telegram

No app download. No leaving the chat. Your full tool catalog opens right inside Telegram.

0

Apps to install

1 tap

To open the catalog

Auto

Matches their Telegram theme

1 What it does

Your audience taps a menu button right inside their chat with your bot — no browser, no app store, no friction — and your entire tool catalog opens in a smooth, native-feeling screen inside Telegram itself. It automatically matches whatever theme (light, dark, or custom colors) they already use in Telegram, and greets them by name.

2 How it works

THEY TAP

The menu button

Right inside their existing chat with your bot — nothing to download or set up on their end.

IT OPENS

Instantly, in-app

Your searchable, categorized tool catalog appears inside Telegram's own interface, styled to match their theme.

THEY TAP A TOOL

And it opens correctly

Every tap is handled the "Telegram way," so it feels like part of the app, not a broken redirect.

3 Why it matters

- **Removes the biggest drop-off point.** Every extra tap, app switch, or page load loses people — this collapses "browse tools" into a single in-chat action.
- **Feels premium.** Most Telegram channels only post links; offering an actual in-app experience sets your channel apart.
- **Meets your audience where they already are.** If your audience lives in Telegram, this is the lowest-friction way to reach them — no separate website visit required.

Ready out of the box

Fully built and tested. Turning it on takes about 10 minutes using the same bot from your Daily Tool Poster setup — no coding, no new accounts.
