Instant

Results as you type

1 What it does

A **Position Size Calculator** helps traders figure out exactly how much to buy without over-risking their account, and a **Compound Interest Calculator** shows how contributions grow over time. Both update results instantly as someone types — no "submit" button, no waiting.

2 Why it matters

- **Genuinely useful, not just a lead magnet.** These are tools people bookmark and return to, building repeat visits.
- **Ends exactly where you want it to.** Every calculation finishes with a natural next step — "now go open that position" — linking straight to your exchange comparison page.
- **Ranks well in search.** "Position size calculator" and similar terms are searched constantly by traders — this is free, ongoing organic traffic.

Ready right now

Both calculators are live, tested, and require no setup or configuration on your part.
