Updates as catalog grows

1 What it does

"Tool A vs Tool B" is one of the most common searches in software buying decisions — people comparing options before they commit. This feature generates a dedicated, indexable page for every meaningful pairing in your catalog automatically, without writing a single comparison by hand.

2 Why it matters

- **Captures decision-stage traffic.** Someone searching "X vs Y" is closer to buying than someone doing general research — this is some of the highest-intent search traffic available.
- **Scales without ongoing writing work.** New comparison pages appear automatically as you add and feature more tools — no content calendar required for this page type.
- **Keeps visitors on your site.** Instead of a visitor leaving to search "X vs Y" elsewhere, they find the answer — and your affiliate links — right here.

Already live

139 comparison pages are generated and indexable today, discoverable both from search and from links on every tool's own page.
